

# ECBS BUDGET & LEAKAGE FORENSICS

Financial Audit & Deductions Analysis Report

MODULE 20: EXPENDITURE ANOMALY DETECTION — FORENSIC EDITION

| CLASSIFICATION | PERIOD     | RECORDS SCANNED | CLASSIFICATIONS | PATTERNS RUN | CASES |
|----------------|------------|-----------------|-----------------|--------------|-------|
| RESTRICTED     | FY 2021-26 | 19,845,384      | 5 Areas         | 6 Patterns   | 1,98  |

IIT KANPUR — Data Analytics & Fraud Intelligence Division

9 June 2026 | Ex-Servicemen Contributory Health Scheme (ECBS)

EXECUTIVE SUMMARY

This report quantifies the total financial leakage and budget impact across the ECHS claims ecosystem. Using database-wide extraction of settlement statistics, we analyze expenditure trends, corporate hospital overbilling, geographical leakage hotspots, gender demographics, and itemized medical audit comments. Across **19,845,384 claims**, the ECHS audit framework successfully stopped **₹3,612.41 Cr in leakage**, achieving a system-wide average deduction rate of **9.96%**.

FRAUD FORENSICS — DETECTION PATTERNS & METHODOLOGIES

PART A: Fraud Classifications (The "Where" & "Who")

| # | Classification Axis            | Targeted Anomaly / Focus                                          | Cases Flagged | Exposure      |
|---|--------------------------------|-------------------------------------------------------------------|---------------|---------------|
| 1 | Overall Baseline Leakage       | National baseline audit & outlier claims (Claim ≥ ₹25,000)        | 659,564       | ₹7,380.72 Cr  |
| 2 | Annual Trends & Inflation      | YoY inflation rates & billing growth (Claim ≥ ₹20,000)            | 766,652       | ₹7,619.60 Cr  |
| 3 | Corporate Hospital Overbilling | Billing details for top 50 highest absolute leakage facilities    | 953,195       | ₹2,359.59 Cr  |
| 4 | Regional Commands & Geography  | Geographic hotspot commands & local billing offices               | 4,401,707     | ₹29,458.98 Cr |
| 5 | Demographic Claims Abuse       | Dependent card-sharing and gender anomalies (Deduction ≥ ₹10,000) | 1,137,393     | ₹8,153.50 Cr  |

PART B: Leakage Execution Patterns (The "How" / Modus Operandi)

| #  | Behavioral Detection Pattern  | Methodology / Focus                                                     | Data Status |
|----|-------------------------------|-------------------------------------------------------------------------|-------------|
| 6  | Itemized Procedure Deviations | Unbundled packages, Antibiotic abuse, and Unjustified line-item billing | Extracted   |
| 7  | Length of Stay (LoS) Abuse    | Bed blocking: Keeping patients admitted > 10 days unnecessarily         | Extracted   |
| 8  | Ping-Pong Admissions          | Split-Package: Discharging and readmitting patient within 48 hours      | Extracted   |
| 9  | Weekend Admission Surge       | The Friday Hustle: Exploiting lack of physical verification on weekends | Extracted   |
| 10 | Doctor / Surgeon Cloning      | The Superman Surgeon: Billing >15 procedures in a single day            | Extracted   |
| 11 | Threshold Avoiding            | The ₹99k Trick: Billing exactly ₹99,000 to avoid senior CFA approvals   | Extracted   |

IMMEDIATE RECOMMENDED ACTIONS

**1. Targeted Audits on Top Overbilling Facilities:** Prioritize physical audits and billing reviews at Vijay Hospital (ID 3149) and Park Hospital Gurgaon (ID 367) to stop immediate leakage.

- 2. Corporate-Level Audit on Park Hospital Chain:** Initiate an in-depth corporate-level audit on the Park Hospital Chain across all empanelled locations to identify systematic package upcoding.
- 3. Deploy Pre-Payment Interception Models:** Implement AI-assisted billing interception rules (as detailed in Module 13 models) to catch leakage pre-payment, saving up to ₹2,274 Crores.
- 4. Enforce NABH Accreditation Standards:** Require mandatory NABH accreditation for all private empanelled hospitals within 3 years to structurally minimize audit errors and lower claim rejection rates.

CLASSIFICATION 1

OVERALL BASELINE LEAKAGE ANALYSIS

Overall Baseline Leakage  
(Claim ≥ ₹25,000 Outliers)

**Description:** This pattern establishes the system-wide baseline for major billing anomalies by tracking the highest-value individual claims. Scanning outlier claims where deductions were applied helps identify systematic inflated billing, improper package selection, and billing for unauthorized procedures.

**How the threshold was derived:** ECHS claims follow a long-tail distribution where the median claim amount is approximately ₹3,800. A baseline filter of ₹25,000 was established because it isolates claims in the 95th percentile. Analyzing claims above this boundary ensures medical auditors target high-exposure transactions where overbilling has the highest fiscal impact.

Table C1 — Top Individual Claims by Deduction Amount (Top 15 Outliers)

| Claim ID | Beneficiary Name     | Svc #     | Hospital Name [ID]                            | Stay   | Claimed (₹) | Deducted (₹) | Ded %  |
|----------|----------------------|-----------|-----------------------------------------------|--------|-------------|--------------|--------|
| 32238407 | HEM JOSHI            | 689984K   | MAYO MEDICAL CENTRE PVT LTD [ID 3419]         | 248 d  | 9,948,017   | 9,948,017    | 100.0% |

Key Findings

**Long-Stay Inpatient Anomalies:** Several top claims represent stay durations exceeding 200 days. Long-term hospital stays without clear clinical justification or progression are primary indicators of administrative boarding and long-stay inpatient billing abuse.

**High Concentration of 100% Rejections:** A significant number of high-value claims were rejected at a 100% rate. These correspond to claims submitted for ineligible procedures, treatments without proper pre-authorization, or invalid member credentials.

CLASSIFICATION 2

ANNUAL EXPENDITURE & DEDUCTION TRENDS

Annual YoY Inflation Trends  
(Claim ≥ ₹20,000 Outliers)

**Description:** This pattern monitors trends in claims, approvals, and audit deductions over fiscal years. Evaluating year-on-year changes helps identify if leakage is compounding over time and if the current audit framework is successfully keeping pace with hospital billing volume growth.

**How the threshold was derived:** Outliers are tracked year-on-year using a claim threshold of ₹20,000. This filter excludes minor outpatient diagnostics and routine consultations, focusing on major inpatient admissions where billing inflation and pricing package deviations are most prevalent.

Table C2 — Annual ECHS Claims & Deduction History

| FY Year | Total Claims | Claimed (₹ Cr) | Approved (₹ Cr) | Deducted (₹ Cr) | Deduction % |
|---------|--------------|----------------|-----------------|-----------------|-------------|
| 2021    | 2,427,999    | 4,163.81       | 3,689.73        | 474.08          | 11.39% ▲    |
| 2022    | 3,502,425    | 6,039.22       | 5,481.88        | 557.34          | 9.23%       |
| 2023    | 5,330,615    | 9,088.64       | 8,302.01        | 786.63          | 8.66%       |
| 2024    | 5,271,213    | 10,351.39      | 9,309.18        | 1,042.21        | 10.07%      |
| 2025    | 3,313,132    | 6,618.39       | 5,866.24        | 752.15          | 11.36% ▲    |
| TOTAL   | 19,845,384   | 36,261.45      | 32,649.04       | 3,612.41        | 9.96%       |

Key Findings

- Audit Rejections Rise (FY 2024–2025):** The system-wide deduction rate rose sharply to 11.36% in FY 2025. This steep increase indicates that audit leakage is rising and hospital billing inflation is intensifying, necessitating stronger pre-payment controls.
- Exponential Expenditure Growth:** Total claimed amounts peaked in FY 2024 at over ₹10,351 Crores. While beneficiary coverage has expanded, the compound growth in claims suggests pricing inflation and excessive billing packages that necessitate structural policy intervention.

CLASSIFICATION 3

Top Overbilling Facilities

(Ranked by Absolute Leakage)

PRIORITY AUDIT LIST — TOP HOSPITALS BY DEDUCTION AMOUNT

**Description:** A small number of private hospitals contribute a disproportionate amount of overall ECHS deductions. Targeted physical audits at these high-leakage facilities yield the highest financial recovery. Below are the top 15 facilities ranked by total budget deducted.

**How the threshold was derived:** Hospitals are selected based on absolute leakage volume. Rather than looking at percentage-based rates which can skew at low claim volumes, this absolute volume threshold ensures audits target the largest sinks of ECHS funds.

Table C3 — Top Private Hospitals by Deduction Volume (Top 15)

"

| Rank | Hospital Name & ECHS ID                                      | Type | NABH | Claims  | Claimed (L) | Approved (L) | Deducted (L) | Ded %  |
|------|--------------------------------------------------------------|------|------|---------|-------------|--------------|--------------|--------|

| —    | TOP 15 TOTAL                                                 | —    | —    | 577,333 | 336,380.29  | 267,522.30   | 68,857.97    | 20.47% |

Key Findings

**Vijay Hospital (ID 3149) Overbilling:** Vijay Hospital exhibits an anomalous 34.00% deduction rate. One in three rupees claimed by this facility is rejected, identifying it as a critical focal point for immediate IPD and billing reviews.

**Park Hospital Chain Cumulative Impact:** With multiple empanelled facilities in the top deduction tiers (Gurgaon, Chowkhandi, Kailash), the Park Hospital chain represents the largest corporate audit target. Chain-level coordination warrants an empanelment review.

CLASSIFICATION 4

REGIONAL DEDUCTION BREAKDOWN — FRAUD GEOGRAPHY

Regional Fraud Geography  
(Command-wise Leakage)

**Description:** Analyzing budget leakage from a geographic perspective highlights commands and regional offices where audit rejection rates are abnormally high, suggesting localized hospital billing cartels or weak local pre-authorization oversight.

**How the threshold was derived:** Focuses on the top 10 regional commands. Evaluating geographic distributions exposes regional differences in pre-authorization policies and local hospital billing behaviors.

Table C4 — Command-wise ECHS Regional Breakdown

| ID | ECHS Region / Command | Hospitals | Claims    | Claimed (₹ Cr) | Deducted (₹ Cr) | Deduction % |
|----|-----------------------|-----------|-----------|----------------|-----------------|-------------|
| 8  | Jaipur                | 261       | 1,321,549 | 3,192.92       | 545.56          | 17.09%      |
| 1  | Delhi                 | 392       | 2,362,788 | 5,034.50       | 458.29          | 9.10%       |
| 29 | Delhi 2               | 325       | 1,847,943 | 2,942.95       | 339.92          | 11.55%      |

Key Findings

- Chennai Region 6 Anomaly:** Chennai Command presents the highest percentage-based leakage rate at 19.13%. This represents a severe geographical anomaly requiring local audit intervention.
- New Delhi Region 1 Exposure:** New Delhi has a moderate deduction rate (10.63%) but drives the highest absolute leakage due to high concentration of major multi-specialty private hospital chains.

PATTERN 1 (BEHAVIORAL)

Item-level Auditor Comments  
(Procedure ≥ ₹50,000 Outliers)

ITEMIZED TARGETED DEDUCTIONS & AUDIT REMARKS

**Description:** Hospital claims consist of multiple itemized lines. By auditing individual line items and compiling the exact text remarks written by medical examiners, we identify the specific clinical reasons private hospitals use to inflate bills.

Pattern 1.1: Package Double-Billing

| Claim ID | Hospital Name [ID]                                           | Claimed (₹) | Deducted (₹) | Ded %  | Auditor Comments / Remarks                                                                                                                                                    |

## Key Findings

**Unbundled & Double-Billing:** In high-value rejections, auditors noted that medications and procedures were already covered under the standard surgical/COVID-19 packages but were billed separately anyway.

**High-End Antibiotic Abuse:** Repeated deductions were due to "multiple high-end antibiotics given in excess/not justified" and charged at double the routine dose. This indicates both a financial risk and a clinical protocol violation.

CLASSIFICATION 5

Gender & Relationship Risk  
(Deduction ≥ ₹10,000 Outliers)

DEMOGRAPHIC LEAKAGE ANALYSIS

**Description:** Analyzing claim volume and audit deduction rates across patient demographics (gender and relationship to the ex-serviceman). This identifies whether specific demographic subsets (such as distant dependents or specific spouse categories) are prone to higher billing anomalies.

**How the threshold was derived:** Focuses on dependent claims where the deduction was at least ₹10,000. This ensures demographic analysis centers on material billing errors rather than routine healthcare usage.

Table C5 — Gender & Relationship Demographic Summary

| Gender | Relationship | Claims    | Claimed (₹ Cr) | Approved (₹ Cr) | Deducted (₹ Cr) | Deduction % | Hospitals Involved |
|--------|--------------|-----------|----------------|-----------------|-----------------|-------------|--------------------|
| M      | Self         | 9,084,002 | 17,083.07      | 15,379.03       | 1,704.05        | 9.98%       | 3,871              |

| M      | Wife         | 1,188     | 3.85           | 3.13            | 0.73            | 18.82%      | 483                |
| F      | Son          | 2,854     | 3.95           | 3.50            | 0.45            | 11.32%      | 738                |
| M      | Daughter     | 2,775     | 2.95           | 2.66            | 0.29            | 9.83%       | 780                |
| F      | Sister       | 2,387     | 2.70           | 2.43            | 0.27            | 9.86%       | 355                |

Key Findings

- Wives & Dependents Package Inflation:** Claims under the "Wife" category show an elevated deduction rate of **15.59%**. This highlights package upcoding risks in female-specific IPD procedures (gynecology/obstetrics) at private empanelled hospitals.
- Primary Volume Concentration:** Self (Male ex-servicemen) and Spouse (Female) categories make up over 85% of total ECHS claim expenditure, maintaining steady deduction rates of 9.98% and 9.68% respectively.

PATTERN 2 (BEHAVIORAL)

LENGTH OF STAY (LOS) ABUSE

Bed Blocking & Unjustified Admissions  
(Stay > 10 Days)

**Description:** This behavioral pattern detects "Bed Blocking"—hospitals deliberately keeping patients admitted for unnecessarily long durations (> 10 days) to inflate daily room rent and routine nursing charges, often without clear clinical progression.

Table P2 — Top Instances of Unjustified Extended Hospital Stays

| Hospital Name                  | City               | Patient Name    | Ailment                   | Admitted   | Discharged | Stay  | Claimed (₹) | Deducted (₹) |

Key Findings

**Intentional Delaying:** Cases with >15 days for routine ailments signify clear abuse of inpatient resources.

PATTERN 3 (BEHAVIORAL)

PING-PONG ADMISSIONS

Split-Package Fraud  
(Readmission < 48 Hours)

**Description:** This highly critical pattern flags "Ping-Ponging"—where a hospital discharges a patient only to readmit them within 48 hours for the same or related condition. This is an explicit attempt to bypass package duration limits and bill two separate procedures instead of one continuous stay.

Table P3 — Top Cases of Split-Package Readmissions (Within 48 Hrs)

| Hospital Name                       | Patient Name         | Admission 1 | Discharge 1 | Admission 2 | Gap (Days) | Combined Claim (₹) |

Key Findings

**Direct Evasion of Package Rules:** The 0-2 day gap signifies that patients were likely never physically discharged from the ward; only their paperwork was closed and reopened to trigger new package rates.

PATTERN 4 (BEHAVIORAL)

The Friday Hustle  
(Abnormal Weekend Admissions)

WEEKEND / HOLIDAY SURGE ADMISSIONS

**Description:** Analyzes the distribution of admissions across the days of the week. Hospitals that show a massive spike in admissions specifically on Fridays, Saturdays, and Sundays are likely exploiting the lack of physical ECHS verifiers on duty during the weekend.

Table P4 — Hospitals with Suspicious Weekend Admission Spikes

| Hospital Name                               | City         | Weekend Admissions | Total Claimed (₹ Cr) | Total Deducted (₹ Cr) |
|---------------------------------------------|--------------|--------------------|----------------------|-----------------------|

CONSOLIDATED SUMMARY

Forensic mapping of budget leakage and anomalous claims across all 7 analyzed patterns.

| Pattern    | Fraud / Leakage Signal                  | Cases Flagged | Exposure (Deducted) |
|------------|-----------------------------------------|---------------|---------------------|
| Classif. 1 | Overall Outlier Claims (≥ ₹25k)         | 659,564       | ₹7,380.72 Cr        |
| Classif. 2 | Annual Trends & Inflation (≥ ₹20k)      | 766,652       | ₹7,619.60 Cr        |
| Classif. 3 | Hospital Type & NABH status (≥ ₹10k)    | 175,448       | ₹1,357.15 Cr        |
| Classif. 3 | Corporate Hospital Overbilling (Top 50) | 953,195       | ₹2,359.59 Cr        |
| Classif. 4 | Regional Commands (Top 10 regions)      | 4,401,707     | ₹29,458.98 Cr       |
| Pattern 1  | Itemized Procedure Deviations (≥ ₹50k)  | 1,463,130     | ₹1,931.93 Cr        |
| Classif. 5 | Demographic Claims Abuse (≥ ₹10k)       | 1,137,393     | ₹8,153.50 Cr        |
| TOTAL      | ECHS Claims Forensics                   | 9,557,089     | ₹3,612.41 Cr        |

STRATEGIC PRE-PAYMENT PROJECTIONS

|                                                                                                                                     |              |
|-------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <b>Conservative Interception</b><br>30% of deductions prevented pre-payment via basic rule-engine.                                  | ₹1,083.72 Cr |
| <b>Moderate Interception</b><br>50% of deductions prevented pre-payment via manual + automated triage.                              | ₹1,806.20 Cr |
| <b>Aggressive Interception</b><br>75% of deductions prevented pre-payment via strict NABH audits.                                   | ₹2,709.31 Cr |
| <b>AI Pre-Approval Interception Model</b><br>Optimized machine-learning pre-approval detection saving 60% of leakage automatically. | ₹2,167.45 Cr |

EMPANELLED POLICY RECOMMENDATIONS

|                                                                                                                                                                                                                    |          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>1. Implement Pre-Payment Anomaly Rules</b><br>Deploy AI-assisted billing interception scoring (as detailed in Module 13 models) to catch leakage pre-payment, saving up to ₹2,167.45 Cr.                        | CRITICAL |
| <b>2. Chain-Level Corporate Audit Review</b><br>Initiate a corporate-level billing audit on the Park Hospital Chain across all empanelled locations to identify systematic package upcoding patterns.              | CRITICAL |
| <b>3. Tighten Empanelment Accreditation Guidelines</b><br>Require mandatory NABH accreditation for all private empanelled hospitals within 3 years to structurally reduce deduction gaps by ₹285–₹320 Cr annually. | HIGH     |
